The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rolled Feed Wheat competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Rolled Feed Wheat is a processed feed made by cleaning and conditioning (adjusting moisture) wheat grains and then pressing them into flakes or flat shapes through roller rolling equipment. Its core purpose is to destroy the seed coat and tissue structure of wheat, making the internal nutrients (such as starch and protein) easier for livestock and poultry to digest and absorb, while improving the palatability and processing adaptability of the feed. It is one of the commonly used energy feeds in animal husbandry.
