Abstracts

Rolling diaphragm air cylinders are a type of pneumatic actuator that use a rolling diaphragm to separate the air chamber from the external environment and to transmit force within the cylinder. These cylinders are primarily used in applications that require a smooth, continuous motion and where traditional piston seals might cause wear or leakage over time. The rolling diaphragm technology offers a distinct advantage over conventional piston-cylinder designs in certain applications due to its flexibility, longevity, and ability to operate in harsh environments.

The global Rolling Diaphragm Air Cylinders market size was estimated at USD 554.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
