Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rolling Mill Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Rolling Mill Oil is a specialized fluid designed to lubricate and cool during the rolling of steel, aluminum, and copper, reducing friction, dissipating heat, and ensuring a smooth surface finish. It is typically formulated from mineral or synthetic base oils blended with emulsifiers, inhibitors, and performance additives to withstand high pressure and temperature. The supply chain runs from refining or synthetic oil production, through blending and packaging by lubricant manufacturers, to delivery at rolling mills, where it is used in hot and cold rolling lines and often recovered and recycled. Globally, the market produces about 670,000 tons annually against a capacity of 880,000 tons, with unit prices ranging from USD 1,800-3,200 per ton and an average gross margin of 24%.
