Report Overview

Rolling Rubber Diaphragm is a mechanical element used to control the flow of liquid or gas, made of rubber or similar material. It is usually round or oval in shape and consists of two or more laminated rubber materials clamped together with metal rings or other materials. The main function of Rolling Rubber Diaphragm is to transfer liquid or gas from one container or pipe to another container or pipe while avoiding mixing between the two containers or pipes. When a pressure differential acts on either side of a rolling rubber diaphragm, it expands or contracts in response to the pressure change, controlling the flow of fluid.
