Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Roof Fascia competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Roof Fascia is the vertical finishing edge or band located at the end of the roof rafters, typically running along the perimeter of a building just below the roofline. It serves both functional and aesthetic purposes—providing a clean, finished look to the roof edge while also supporting components like gutters and acting as a barrier that protects the underlying roofing structure from moisture, pests, and weather damage.
