## Abstracts

Roof and Wall Insulation System is a functional system used in building envelope structures. It reduces heat conduction, improves energy efficiency and improves indoor comfort by adding insulation materials to roofs and walls. These systems are usually composed of insulation materials (such as fiberglass, polyurethane foam, rock wool or vacuum insulation panels) and protective layers (such as waterproof membranes or metal panels). They can effectively block heat loss or entry, and have multiple functions such as moisture and fire resistance. Modern insulation systems not only play a key role in improving the energy-saving performance of buildings, but also have an important impact on the acoustic environment and environmental sustainability of buildings. They are widely used in new construction and renovation projects.

The global Roof and Wall Insulation System market size was estimated at USD 1267.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
