The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rooftop Air-conditioning System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Rooftop Air-conditioning System production reached approximately 3,319 k units, with an average global market price of around US\$ 1693 per unit. Gross margin is about 44%. The cost is 948 usd. Production capacity 3,500 to 3,600 k units. Rooftop Air-conditioning Systems are independent air conditioning units integrated and installed on the roof of vehicles or buildings to provide cooling, heating, and ventilation. These systems are widely used in buses, RVs, construction vehicles, rail transit, and some commercial buildings, characterized by their compact structure, easy installation, and energy efficiency. The upstream of the industry chain mainly includes suppliers of core components such as compressors, condensers, evaporators, motors, control modules, and refrigerants; the midstream consists of complete machine manufacturers and system integrators, responsible for the design, assembly, and performance optimization of the air conditioning system; the downstream encompasses vehicle manufacturers, fleet operators, and building HVAC system integrators, who are responsible for installation, testing, and after-sales maintenance services. With the development of new energy vehicles and intelligent air conditioning control technology, rooftop air conditioning systems are evolving towards modularity, integration, intelligent control, and environmentally friendly refrigerants.

The global Rooftop Air-conditioning System market size was estimated at USD 5620.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
