Abstracts

Rooting hormone powder is a horticultural product formulated to stimulate root development in plant cuttings, typically containing synthetic auxins such as indole-3-butyric acid (IBA) or naphthaleneacetic acid (NAA) as active ingredients. It is applied to the cut end of a stem or leaf cutting to encourage faster and more robust root formation, thereby increasing the success rate of plant propagation for both amateur gardeners and commercial nurseries. The product is available in various concentrations tailored to different plant types?softwood, semi-hardwood, or hardwood cuttings?and is valued for its ease of use, stability in powder form, and effectiveness in promoting healthy root systems without the risk of rapid degradation often associated with liquid formulations.
