## Abstracts

Rose hip fruit extracts are concentrated preparations derived from the fruit of the rose plant (*Rosa* species), particularly *Rosa canina* and *Rosa rugosa*, which are valued for their high content of bioactive compounds including vitamin C, polyphenols, carotenoids, flavonoids, and galactolipids. These extracts are primarily utilized in the health and wellness sector as dietary supplements, often promoted for anti-inflammatory, antioxidant, and immune-supporting properties, as well as in the cosmetics and personal care industries for their skin-nourishing and anti-aging benefits due to their ability to support collagen synthesis and protect against oxidative stress. The production process typically involves harvesting ripe rose hips, drying, and employing solvent extraction or supercritical fluid extraction methods to obtain a potent concentrate available in various forms such as powders, oils, and liquid tinctures, catering to diverse application requirements across nutraceutical, functional food, beverage, and topical product formulations.

The global Rose Hip Fruit Extracts market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
