Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rotary Compressor for Air Conditioner competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Rotary Compressor for Air Conditioner production reached approximately 13,100 k units with an average global market price of around US\$ 300 per unit, a single-line production capacity of approximately 10,000 units/year, and a gross profit margin of approximately 10%-30%. Rotary Compressor for Air Conditioner is a type of positive displacement compressor that compresses refrigerant gas through the rotational motion of a roller inside a cylindrical chamber. During operation, a roller mounted eccentrically on the motor shaft rotates within the cylinder, and a spring-loaded vane divides the compression chamber into suction and discharge regions. As the roller turns, the refrigerant gas is drawn into the suction side, compressed by the decreasing volume, and discharged as a high-pressure gas to the condenser. Rotary compressors are widely used in residential and light commercial air conditioners due to their compact design, smooth operation, and relatively low noise level. Compared with reciprocating compressors, rotary compressors have fewer moving parts, resulting in higher mechanical reliability and reduced vibration.

The global Rotary Compressor for Air Conditioner market size was estimated at USD 3938.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
