Abstracts

Rotary cutters, also called rotary cutting dies or rotary dies, are a type of die cutting which utilizes custom-designed cylindrical dies affixed to a rotary press to convert material. It is used in a process called Rotary die cutting, which is a special kind of die cutting that uses a cylindrical die to cut shapes out of material. It moves around and around in a circular motion and has blades to cut out the desired shape around the entirety of the cylinder. There are two major types of dies used in this process, flexible rotary dies or solid rotary dies. Flexible dies are composed of a thin sheet of engraved metal (usually tool steel) affixed to a separate magnetic cylinder, while solid dies are composed solely of an engraved solid metal cylinder. Although both flexible and solid dies are capable of cutting most types of materials, each carries its advantages and disadvantages in regards to manufacturing applications. The major players in global Rotary Cutters market include RotoMetrics, Atlas Die (Bernal), Marbach Group, etc. The top 3 players occupy about 50% shares of the global market. North America and Europe are main markets, they occupy about 70% of the global market. Solid Rotary Cutting Dies is the main type, with a share about 55%. Consumer Goods and Personal Care are main applications, which hold a share about 50%.
