Report Overview

Rotary Cylinder Dryer is a commonly used drying equipment, usually used to dry granular, lumpy or powdery materials. It consists of a rotating cylinder, burner, fan, dust collection device and other components. The Rotary Cylinder Dryer adopts the direct drying technology. It mainly adopts the downstream drying method, that is, the hot air and the material enter from the same end, that is, the feed end. On the one hand, the angle between the cylinder and the horizontal line is affected. Influenced by the influence, the material flows downward. On the other hand, the cylinder is equipped with a lifting plate. During the lifting and dropping process of the lifting plate, the material can fully contact with the hot air, and finally achieve the effect of drying. From the discharge end discharge.
