Report Overview:

Rotary friction welding is a solid-state joining process. The technique, also known as spin welding, involves one part to be joined being spun at high speeds and pressed against the other part to be joined, which is held in a stationary position. The resulting friction heats the parts to a temperature at which they can join together, at which point the rotational force is removed and the two parts are pushed together while they cool.

The Global Rotary Friction Welding Machine Market Size was estimated at USD 211.34 million in 2023 and is projected to reach USD 272.07 million by 2029, exhibiting a CAGR of 4.30% during the forecast period.
