Report Overview

A rotary gripper module is a compact module that is used for handling small parts in various industries. This rotary gripper module is a compact package of integrated gripper and rotation functions. A rotary gripper module consists of two units: one unit is for providing a gripping function, and another unit is for providing a rotating function. The main advantage of a rotary gripper module is that, it can be used for gripping and rotating small to medium work pieces in low contamination environments and at places where space is limited. A rotary gripper module has a variable rotation range along with adjustable angle property. The rotary motion is implemented with the use of a stepper motor, while the gripping action is achieved with the help of a stepper motor or pneumatically using a cylinder. Rotary gripper modules can be used in different applications, such as unloading and loading work pieces, insertion operations in assembly processes, and the picking of finished products in packaging units.

The global Rotary Gripper Module market size was estimated at USD 487 million in 2023 and is projected to reach USD 681.25 million by 2032, exhibiting a CAGR of 3.80% during the forecast period.
