### Report Overview:

Rotary lobe pumps are non-contacting and have large pumping chambers, allowing them to handle solids such as cherries or olives without damage. They are also used to handle slurries, pastes, and a wide variety of other liquids. If wetted, they offer self-priming performance. A gentle pumping action minimizes product degradation. They also offer reversible flows and can operate dry for long periods of time. Flow is relatively independent of changes in process pressure, so output is constant and continuous.

The Global Rotary Lobe Pumps Market Size was estimated at USD 989.43 million in 2023 and is projected to reach USD 1266.45 million by 2029, exhibiting a CAGR of 4.20% during the forecast period.
