Abstracts

Sputtering Cathode is the core component of the magnetron sputtering device. It is divided into flat (rectangular/circular) sputtering cathode and rotating sputtering cathode. Magnetron sputtering is a physical vapor deposition (PVD) process, which is a type of vacuum deposition process. Magnetron sputtering introduces a magnetic field to the surface of the target cathode and uses the magnetic field to constrain charged particles to increase the plasma density to increase the sputtering rate. It is widely used in industrial coatings. This article mainly counts rotating sputtering cathodes. The major global manufacturers of Rotary Sputtering Cathode include Sputtering Components Inc., Hangzhou Longway, VON ARDENNE GmbH and Soleras, etc. The world's top three vendors accounted for approximately 46 % of the revenue. Asia-Pacific is the largest market, has a share about 66%, followed by North America, and Europe, with share 15% and 14%, separately. In terms of type, it is divided into less than 100 mm, 100-200 mm and more than 200 mm, and in terms of application, Semiconductor has a share about 52 percent.

The global Rotary Sputtering Cathode market size was estimated at USD 64.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.60% during the forecast period.
