Abstracts

Rotary Steerable System (RSS) tools are advanced downhole drilling technologies used in directional and horizontal drilling to precisely steer the drill bit while continuously rotating the drill string. Unlike traditional steerable motors that require stopping and sliding to adjust direction, RSS tools enable real-time steering adjustments while drilling, improving wellbore quality, drilling speed, and efficiency. These tools use hydraulic, mechanical, or electric actuators to control the borehole trajectory based on commands from the surface or pre-programmed instructions. RSS technology is widely used in complex wells such as extended-reach, offshore, and unconventional reservoirs, offering better control, reduced drilling time, and enhanced data acquisition.

The global Rotary Steerable System Tools market size was estimated at USD 375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
