Report Overview

Rotary Steerable System (RSS) is a type of drilling tool used in the oil and gas industry to control the direction of a drilling well. The RSS uses a combination of rotary motion and hydraulic pressure to steer the drill bit in a specific direction, allowing for more precise and efficient drilling. Unlike traditional drilling methods, which require the drill string to be rotated to steer the drill bit, the RSS rotates the bit and steers it simultaneously, reducing the need for multiple trips in and out of the well.
