Report Overview

Rotary Stepper Motors are a type of electric motor that converts electrical pulses into precise mechanical rotation. They are called 'stepper' motors because they move in discrete steps or increments, unlike continuous rotation motors. The motor consists of a rotor and stator, with the rotor divided into magnetic poles. These poles are attracted or repelled by the electromagnets in the stator, causing the rotor to move in a step-wise manner. Rotary Stepper Motors offer precise control over position and speed, making them suitable for applications requiring accurate positioning, such as robotics, 3D printers, and CNC machines.
