Abstracts

Rotary synchronous motors are a type of alternating current (AC) motor where the rotation of the shaft is synchronized with the frequency of the supply current, maintaining a constant speed under varying loads, which distinguishes them from induction motors that experience slip. These motors are characterized by their high efficiency, precise speed control, and ability to operate at leading power factors, making them particularly suitable for applications requiring exact positioning, such as in robotics, CNC machinery, conveyor systems, and industrial automation, as well as in energy-intensive sectors like compressors, pumps, and fans where energy savings are critical. They are available in various designs, including permanent magnet synchronous motors (PMSMs) and reluctance synchronous motors, each offering specific advantages in terms of torque density, cost, and operational performance.

The global Rotary Synchronous Motors market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
