## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rotary Type Cold Water Meter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Rotary type cold water meter is a common type of water meter, mainly used for measuring water flow in households, commercial and industrial places. It rotates under the action of water flow through a rotor (also known as a rotor) to measure water flow rate. The core component of a rotary type cold water meter is a rotor equipped with a rotor. When water flows through the meter, the power of the water flow causes the rotor to rotate. The rotation of the rotor is transmitted to a counter through a mechanical transmission system, which records the number of rotations and calculates the water flow rate. The faster the water flow, the faster the rotor rotates, reflecting a larger flow rate.

The global Rotary Type Cold Water Meter market size was estimated at USD 1831.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
