Report Overview:

An uninterruptible power supply or uninterruptible power source (UPS) is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. The on-battery run-time of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. It is a type of continual power system.

The Global Rotary Uninterruptible Power Supply Market Size was estimated at USD 738.86 million in 2023 and is projected to reach USD 951.19 million by 2029, exhibiting a CAGR of 4.30% during the forecast period.
