## Abstracts

Rotating nozzle is a rotating nozzle, usually installed on the water nozzle of cleaning equipment, spraying equipment, fountain and other equipment. The design purpose of this nozzle is to facilitate the adjustment of the spray angle and water spray volume to meet different usage requirements. A rotary nozzle usually consists of a nozzle body, a drive mechanism and a control device. The main body of the nozzle is used for spraying water, the driving mechanism drives the main body of the nozzle to rotate, and the control device can adjust the water spraying volume and spraying angle.
