Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rotating Self-Locking Safety Hook competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The rotating self-locking safety hook is a hook with an automatic locking function, which is widely used in lifting and connection operations. Its characteristic is that a self-locking mechanism is designed at the hook mouth. When the load is applied, the hook mouth automatically closes and locks the object to prevent the object from accidentally falling off during the lifting process. The hook body can be rotated, which is convenient for use at different angles, providing higher operational flexibility and safety. The rotating self-locking safety hook is usually made of high-strength alloy steel and has a strong load-bearing capacity. It is suitable for heavy lifting operations in industries such as construction, logistics, and cranes.

The global Rotating Self-Locking Safety Hook market size was estimated at USD 1028.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
