Abstracts

Rotator cuff tear is a rip in the group of four muscles and tendons that stabilize your shoulder joint and let you lift and rotate your arms (your rotator cuff). This common shoulder disorder is often caused by repetitive overhead motions in jobs or sports. The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs. Sports and shoulder-related physical activity can place high stress on the shoulder, which can lead to the development of rotator cuff tendinitis, causing pain and weakness in the shoulder that further restricts the movement of the arm. The upper extremity accounts for one-third of sports injuries. Athletes who play sports such as baseball, tennis, handball, and volleyball experience situations such as severe trauma or falls. Such events can increase the severity of shoulder injuries, including tendinopathy from rotator cuff contusions and rotator cuff tears. Approximately 3.5 million sports injuries are registered in the United States each year. Regenerative biologics is a rapidly growing field that is expected to significantly change the face of

sports orthopedics. Despite the development of advanced sutures, high failure rates have encouraged many researchers to opt for biological therapies to stimulate wound healing. Many players are shifting their focus significantly to expand their product offerings in this segment. Moreover, the emergence of many new players in the development of innovative regenerative biologics may bring potentially promising treatment options for rotator cuff injuries, key factors driving the growth of this market include increase in sports-related shoulder injuries, arthroscopic procedures. Technological advancements in devices, increase in aging population suffering from osteoarthritis, strong focus of participants on launching highly advanced devices for arthroscopic treatment.
