Abstracts

Desiccant type Dehumidification is achieved by passing air through a honeycomb-shaped rotor impregnated with an adsorbent such as silica gel. Once it has adsorbed moisture, the rotor will become saturated if it continues to adsorb moisture. Therefore, the rotor rotates and moves to the regeneration zone. Heated air passes through the rotor to remove the adsorbed moisture. (The moisture-laden air is then exhausted.) This process is performed continuously to achieve stable dehumidification. Global key players of Rotor Desiccant Dehumidifiers include Munters, Seibu Giken, Trotec, Condair, Bry-Air, etc. The top five players hold a share over 62%. Europe is the largest market, with a share about 30%, followed by United States and China, with share 26% and 21%, separately. In terms of application, Chemical has a share about 26 percent.

The global Rotor Desiccant Dehumidifiers market size was estimated at USD 246.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
