Report Overview

The router and switch market encompasses networking hardware devices essential for directing and managing data traffic across networks. Routers operate at the network layer (Layer 3) of the OSI model, connecting multiple networks and directing data packets between them using IP addresses, while switches function at the data link layer (Layer 2), facilitating communication within a local area network (LAN) by forwarding data frames to specific devices based on MAC addresses. These devices are critical for both enterprise and consumer networks, enabling efficient data transfer, security, and network segmentation. The market is driven by increasing demand for high-speed internet, cloud computing, IoT adoption, and the expansion of 5G networks, with key players including Cisco, Huawei, Juniper Networks, and HPE. Growth is further fueled by advancements in software-defined networking (SDN) and the need for scalable, secure, and high-performance infrastructure in data centers and enterprise environments.
