## Abstracts

RWOCS is a multipurpose system, developed to simplify well access, well intervention and work over operations from any type of vessel. With the use of a RWOCS skid, all the operational control equipment is fitted inside a skid and mounted under the ROV, thus no additional deck spread is needed than what is already being used by the ROV system ? making it easy to move the system between installations as needed. This method eliminates the need for an open-water control umbilical and a deployment frame deployed from the surface vessel. This is attractive in terms of the overall operational time required for subsea equipment deployment operations. RWOCS optimizes completions, tree installation, workovers, intervention, and plug and abandonment operations. The solution removes the need for large, surface-controlled equipment, moving service activity subsea.

The global ROV Workover Control Systems (RWOCS) market size was estimated at USD 138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
