Robotic Process Automation (RPA) combines software robots or ?bots? to automate repetitive, rule-based digital tasks traditionally performed by humans, such as data entry, invoice processing, or customer onboarding, by interacting with applications and systems through user interfaces rather than through deep integration. Hyperautomation extends this concept by integrating RPA with advanced technologies?including artificial intelligence (AI), machine learning (ML), process mining, and analytics?to automate not only routine tasks but also complex, end-to-end business processes, enabling more intelligent decision-making, adaptability, and scalability across an organization?s operations. The global market for these technologies is experiencing rapid growth, driven by increasing demand for operational efficiency, cost reduction, and digital transformation across industries such as finance, healthcare, manufacturing, and retail. Key trends include the shift from task-level automation to process-level optimization, the growing importance of AI/ML in enhancing bot capabilities, and heightened investment in cloud-based and scalable automation platforms. While adoption is accelerating, challenges remain around implementation complexity, integration with legacy systems, and the need for upskilling workforces, though these are increasingly being addressed through improved tooling and managed services. Competition is intensifying among established vendors and new entrants, with innovation focusing on ease of use, cognitive capabilities, and industry-specific solutions.

The global Rpa And Hyper Automation market size was estimated at USD 14850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
