Abstracts

Reverse electrolytic copper foil (RTF) is a copper foil with different degrees of roughening on both sides of the copper foil. In this way, the peeling resistance of both sides of the copper foil is strengthened at the same time, making it easier to be used as an intermediate layer to fit with other materials. Moreover, the two sides of this copper foil are treated differently, making the side with the thinner roughened layer more likely to be etched.

Market Concentration and Key Players: The market concentration of reverse treated copper foil is relatively high. Internationally, Japanese and Korean enterprises have developed well in the field of reverse processing copper foil, such as Furukawa Electric, Mitsui Mining & Smelting and Fukuda. Domestically, China pulverized coal boiler market has a certain concentration degree, and a few large enterprises control most of the market, such as Shanxi Blue Sky, Zhengzhou Boiler and Hangzhou Xizi United.

Manufacturing Processes and Market Trends: The manufacture of reverse-treated copper foil begins with the electrolytic deposition of high-purity electrolytic copper, forming a uniform thin layer by precisely controlling current density and temperature. Subsequently, the copper foil is subjected to surface pretreatment to remove impurities, and the opposite side is roughened to enhance adhesion to the substrate, while keeping the other side smooth for signal transmission. The next step is fine machining to optimize the surface structure and flatness to ensure electrical performance. The entire process is accompanied by rigorous quality testing, from size measurement to physicochemical properties testing, to ensure that the product meets high standards. Finally, qualified copper foil is properly packaged and stored to prevent oxidation from affecting quality.

With the growth of market demand for high-frequency high-speed copper clad laminate, the application fields of RTF copper foil are also expanding, especially in 5G communication equipment, new energy vehicles and energy storage systems. 5G network deployment accelerates the demand for PCB materials capable of supporting higher frequencies and faster transmission speeds; at

the same time, the rapid development of the electric vehicle market also promotes the demand for high-performance, lightweight and highly reliable electronic components, which bring new opportunities for RTF copper foils. In addition, consumer electronics continue to upgrade, smartphones, tablets and other smart devices towards thinner, faster, more versatile direction, further expanding the range of RTF copper foil applications.

The global RTF Copper Foil market size was estimated at USD 2274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
