Abstracts

RTK is a high-precision positioning technology based on satellite navigation systems (such as GPS, Beidou, etc.), which uses differential methods to achieve real-time centimeter-level positioning. Its basic principle is to set up a base station (reference station) at a known location to receive satellite signals and calculate the satellite positioning error of that location. Then, these errors are transmitted to the mobile terminal (rover) in real time through wireless communication, enabling accurate real-time positioning.

The global RTK Positioning Terminal market size was estimated at USD 1122.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
