Report Overview

A Rubber Abrasion Tester, also known as an Abrasion Resistance Tester or Taber Abrasion Tester, is a device used to determine the resistance of rubber or other materials to abrasive forces. It measures the wear and damage caused by repetitive rubbing or sliding motions, simulating real-life scenarios where rubber products may come into contact with abrasive surfaces. The tester typically consists of a rotating platform upon which a specimen of rubber or other material is placed. The specimen is subjected to constant abrasion through the use of abrasive wheels or discs that rub against it under controlled conditions. The number of rotations or the duration of the test determines the level of abrasion resistance.
