Abstracts

Rubber accelerator DCBS, scientifically known as N,N'-dicyclohexyl-2-benzothiazolesulfenamide, is a delayed-action sulfenamide-type accelerator primarily used in the rubber industry to enhance the vulcanization process of natural and synthetic rubbers. It functions by initiating and controlling the cross-linking of polymer chains during curing, thereby improving the efficiency, speed, and consistency of rubber production while offering excellent processing safety and scorch resistance. Commonly applied in the manufacturing of tires, conveyor belts, hoses, and other industrial rubber goods, DCBS provides a balanced cure profile with moderate curing rates and contributes to the final product's mechanical properties, such as tensile strength, elasticity, and durability. Its delayed action allows for longer processing windows, reducing the risk of premature vulcanization during mixing and shaping operations, which is particularly valuable in complex or large-scale rubber article production.

The global Rubber Accelerator Dcbs market size was estimated at USD 625.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
