Abstracts

Rubber accelerator DPG, chemically known as N,N'-Diphenylguanidine, is an organic compound widely used in the rubber industry as a secondary accelerator to enhance the efficiency and performance of primary accelerators such as sulfenamides and thiazoles during the vulcanization process. It functions by promoting faster and more uniform cross-linking of polymer chains, thereby improving the physical properties of rubber products, including tensile strength, elasticity, and heat resistance, while also offering better control over the scorch time to prevent premature curing. DPG is particularly valued in the production of technical rubber goods, tires, conveyor belts, and footwear, where consistent quality and durability are critical.

The global Rubber Accelerator Dpg market size was estimated at USD 480.15 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.45% during the forecast period.
