Report Overview:

Accelerants are substances that can bond, mix or disturb another substance and cause an increase in the speed of a natural, or artificial chemical process. Accelerants play a major role in chemistry—most chemical reactions can be hastened with an accelerant. Accelerants alter a chemical bond, speed up a chemical process, or bring organisms back to homeostasis. Accelerants are not necessarily catalysts as they may be consumed by the process.

The use of accelerators and activators lowers the activation energy of vulcanization reaction to 80-125kJ/mole from 210kJ/mole which is necessary if we use sulfur alone.

The Global Rubber Accelerator TBBS Market Size was estimated at USD 654.82 million in 2023 and is projected to reach USD 838.16 million by 2029, exhibiting a CAGR of 4.20% during the forecast period.
