Abstracts

Rubber anti-aging agents, also known as antioxidants or antiozonants, are specialized chemical additives designed to inhibit or delay the degradation of rubber products caused by environmental factors such as oxygen, ozone, heat, and mechanical stress. These compounds function by interrupting the oxidative chain reaction that leads to polymer chain scission, cross-linking, and loss of elastomeric properties, thereby extending the service life, maintaining mechanical integrity, and preserving the functional performance of rubber-based materials across applications ranging from automotive tires and industrial seals to consumer goods and construction materials.

The global Rubber Anti Aging Agent market size was estimated at USD 1420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
