Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rubber Antioxidant MBI competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Rubber antioxidant MBI (2-mercaptobenzimidazole, CAS 58339-1) is a conventional non-staining antioxidant widely used in natural rubber and synthetic rubbers such as SBR, NBR, and CR. It significantly enhances resistance to heat, oxygen, and ozone aging during vulcanization and service, making it particularly suitable for transparent or light-colored rubber products due to its low discoloration and non-polluting nature. The compound appears as a white powder with a high melting point (~290-300°C), low volatility, and is often used synergistically with amine or phenolic antioxidants to improve anti-cracking and inhibit metal-induced degradation.

The global Rubber Antioxidant MBI market size was estimated at USD 91.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
