### Report Overview

A rubber roller is a machine part that is composed of an inner round shaft or tube covered by an outer layer of elastomer compounds. Rubber roller applications relate to material application, movement facilitation and material support and transportation. Examples of these applications include: conveyor belt, assembly line operation, grocery store checkout line operation, mail machine operation, printing, rotary screen printing, automotive rubber components laminating, industrial heat treat equipment operation, automatic car wash movement and boat trailer function. They're also commonly used as wheels and castors. However, rubber covered rolls are primarily used in conveyor belts to help move things since rubber has a high coefficient of friction that makes them apt candidate for covering rolls.
