Abstracts

The rubber heat resisting agent market encompasses a specialized segment of the chemical additives industry focused on products designed to enhance the thermal stability and performance of rubber compounds under high-temperature conditions. These agents, which include chemical additives such as antioxidants, antiozonants, and heat stabilizers, function by inhibiting oxidative degradation, preventing chain scission, and delaying the onset of aging processes that compromise rubber integrity. They are critical in applications where rubber components are exposed to sustained or cyclic thermal stress, such as in automotive tires, industrial hoses, conveyor belts, seals, and aerospace components. The demand for these agents is closely tied to end-use industries requiring durable, high-performance elastomers capable of operating reliably in elevated temperature environments, driving both innovation and competition among suppliers to develop more efficient, environmentally compliant, and cost-effective solutions.

The global Rubber Heat Resisting Agent market size was estimated at USD 380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
