Abstracts

Rubber sheets are rubber molded into flat sheets with an even thickness and are often sold on a roll of a specific length for easy handling. Common thicknesses of rubber sheets vary from super-thin films to 1/4-inch (6.53 mm) thick, and the thickness of the sheet combined with the type of rubber used in the sheet determine its use. Once the material type is known, tools designed to cut through the rubber are used to cut different shapes from the sheet to form gaskets. The gaskets cut from rubber sheeting keep fluids and gases from penetrating products or keep them contained within vessels or low-temperature mechanical systems. The industry is crowded with producers and fierce competition. Its main producers, Contitech, American Biltrite and Jinteng, account for about 9% of its combined revenue.

The global Rubber Sheet market size was estimated at USD 5316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Rubber Sheet market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
