Report Overview

Rubeola ELISA Kits are enzyme-linked immunosorbent assay (ELISA) kits designed for the detection of measles virus antigens in biological samples. Rubeola is the scientific name for measles, a highly contagious viral disease that affects the respiratory system and can lead to severe complications, especially in young children and immunocompromised individuals. These kits use antibodies to specifically detect measles virus antigens, providing a rapid and accurate diagnostic tool for healthcare professionals. By measuring the levels of measles virus antigens in patient samples, Rubeola ELISA Kits assist in early detection of the disease and effective treatment.
