Report Overview

A Rubidium Frequency Standard is a highly precise electronic device used for generating stable and accurate frequency signals, typically in the range of radio frequencies. It operates on the principle of using the natural resonance frequency of Rubidium-87 atoms when exposed to a magnetic field. These atoms absorb and emit microwave radiation at a specific frequency, which is used to regulate an oscillator within the device. The Rubidium Frequency Standard is known for its high stability and low drift, making it ideal for applications requiring precise timekeeping and synchronization, such as in telecommunications, GPS systems, and scientific research.
