Abstracts

A runabout for water skiing is a specialized type of powerboat designed primarily for recreational towing activities such as water skiing, wakeboarding, and tubing. Typically ranging from 16 to 24 feet in length, these boats feature powerful inboard or sterndrive engines for strong acceleration and consistent speed control, a deep-V or modified-V hull for stability in choppy water, and an open bow or walk-through windshield design to facilitate passenger movement and interaction. Key characteristics include a low freeboard for easy reboarding from the water, swim platforms for accessibility, and often integrated ballast systems or wake-shaping technology to enhance the wake for skiing or surfing. Unlike general-purpose recreational boats, runabouts for water skiing prioritize performance, maneuverability, and rider-focused amenities, making them distinct from fishing boats, cruisers, or pontoon boats.

The global Runabout For Water Skiing market size was estimated at USD 220.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
