Abstracts

Runway center line lights are precision-engineered, high-intensity visual aids embedded along the center line of a runway, typically on precision approach runways (such as CAT I, II, or III), to provide critical guidance to pilots during takeoff, landing, and low-visibility operations. These lights are usually white from the threshold to the point 900 meters from the runway end, transitioning to alternating red and white for the next 600 meters, and finally red for the final 300 meters to signal the approaching end of the runway. They enhance situational awareness, improve alignment accuracy, and contribute significantly to aviation safety by delineating the runway center in adverse weather conditions, such as fog, heavy rain, or darkness, ensuring compliance with international aviation standards set by organizations like ICAO and FAA.

The global Runway Center Line Light market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
