## Abstracts

Runway ETPU foam particles are expanded thermoplastic polyurethane beads specifically engineered for use in athletic running tracks and other sports surfaces. These particles are designed to provide optimal shock absorption, energy return, and durability under repeated impact. They are often combined with other materials, such as polyurethane binders, to create a resilient and consistent running surface that minimizes athlete fatigue and reduces the risk of injuries. The closed-cell structure of the ETPU contributes to weather resistance and long-term performance. The industry trend for runway ETPU foam particles is focused on enhancing athletic performance, improving sustainability, and increasing the lifespan of running tracks. There's a growing demand for tracks that offer higher energy return, allowing athletes to run faster and with less effort. This is driving research into ETPU formulations with optimized rebound properties. Sustainability is also a key concern, with manufacturers exploring bio-based ETPU options and developing recycling programs for end-of-life tracks. This includes using recycled ETPU content and designing track systems that can be more easily disassembled and recycled. Furthermore, there's a trend towards improving the durability and weather resistance of tracks to reduce maintenance needs and extend their lifespan. This involves developing ETPU particles with enhanced UV resistance and resistance to degradation from extreme temperatures and moisture. Finally, advancements in installation techniques and track construction are leading to more consistent and uniform running surfaces, providing a safer and more predictable experience for athletes. This includes pre-fabricated track sections and improved on-site installation methods. These trends collectively aim to create high-performance, sustainable, and long-lasting running tracks using advanced ETPU technology.

The global Runway ETPU Foam Particles market size was estimated at USD 417.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
