Abstracts

Lights are easily one of the most important fixtures present on a runway. Runway lights guide pilots during the takeoff and landing procedures. In reality, all lights on an airfield are essential to the safe and efficient aircraft operations during takeoff, landing, and taxiing. Runway edge lights are white, transitioning to amber near the departure end of the runway. The ends, or thresholds, of the runways have green lights at the beginning of the runway, or approach end. The departure end is marked by red lights delineating the end of operational pavement. Recessed in-pavement runway lights, also white in color, are common at most large airports to provide enhanced runway visibility. These lights are typically used in conjunction with approach light systems, which extend beyond the runway ends, providing a visual queue for the pilots to line-up the aircraft during approach. Global Runway Lighting key players include ADB SAFEGATE, Honeywell, Hella (TKH), Eaton, OSRAM, etc. Global top five manufacturers hold a share about 60%. Europe is the largest market, with a share over 30%, followed by North America and China, both have a share about 40 percent. In terms of product, LED is the largest segment, with a share over 60%. And in terms of application, the largest application is Civilian and Commercial Airport, followed by Military Airport.

The global Runway Lighting market size was estimated at USD 353.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
