Abstracts

A runway management system (RMS) is an integrated suite of hardware and software tools designed to enhance the safety, efficiency, and capacity of airport runway operations by optimizing the sequencing and spacing of arriving and departing aircraft, managing surface movements, and mitigating potential conflicts or runway incursions. These systems leverage real-time data from surveillance sources?such as radar, ADS-B, and multilateration?along with predictive algorithms and decision-support tools to provide air traffic controllers and airport operators with actionable insights for managing runway occupancy times, reducing delays, minimizing environmental impact, and maintaining compliance with aviation regulations. By automating complex operational tasks and improving situational awareness, RMS plays a critical role in modernizing air traffic management, especially at congested airports where maximizing throughput without compromising safety is a primary concern.

The global Runway Management System market size was estimated at USD 132.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
