Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sacrificial Mold Release Agent (SMRA) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sacrificial mold release agents are applied in every molding cycle. The release agent film on the mold surface is in great part depleted after each molding cycle and needs to be replenished. Sacrificial mold release agents are generally non-functional, non-reactive coatings that create a physical barrier between the mold and material that is transferred to and removed with the molded part. Sacrificial release agents are designed for frequent application and generally offer limited releases per application. At the onset of molding operations, sacrificial mold release agents were the only available category. Hence the reason they are often referred to as conventional release agents. In 2024, global production of sacrificial release agents reached 273,100 tons, with an average selling price of US\$1,893 per ton. Typical single-line capacity is approximately 5,000-10,000 tons per year, and the industry's gross profit margin is approximately 25%-35%. Cost structure: direct materials account for approximately 65%, manufacturing costs account for approximately 25%, and labor costs account for approximately 10%. Industry chain: upstream suppliers include chemical raw material suppliers such as solvents, resins, waxes, and silicone/fluorinated additives; downstream suppliers include composite material manufacturers, rubber and polyurethane product manufacturers, and wood processors.

The global Sacrificial Mold Release Agent (SMRA) market size was estimated at USD 517.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
