Report Overview:

Sacroiliac joint fusion is a surgical procedure which fuses the iliac bone (pelvis) to the spine (sacrum) for stabilization. It is performed for a variety of conditions including trauma, infection, cancer, and spinal instability. Sacroiliac joint fusion may be performed as a minimally invasive surgical (MIS) procedure or as an open surgical procedure requiring a larger incision and subsequent increased recovery time. Percutaneous SIJ fusion is a MIS approach in which instrumentation involving cages or screws, with or without bone graft, are placed percutaneously in order to achieve a fusion. Fusion of the SIJ, combined with bone grafts and other metal implant devices, is an extensive procedure; generally considered a salvage procedure when all other measures have failed to provide pain relief.
