Abstracts

Safety electronic airbags are sophisticated passive restraint systems integrated into vehicles, designed to deploy rapidly during a collision to cushion and protect occupants from impact with interior surfaces. These systems rely on a network of sensors, including accelerometers and impact detectors, which communicate with an electronic control unit to trigger the inflation of airbags using a chemical or pyrotechnic reaction, all within milliseconds of detecting a crash. The primary function is to reduce the risk of serious injury or fatality by distributing forces more evenly and limiting contact with hard structures, with modern variants offering multi-stage or adaptive deployment based on factors like crash severity, occupant position, and seatbelt usage.

The global Safety Electronic Airbag market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
